

# Computer Aided Design and Manufacturing

The impact of the technology of Computer-Aided Design and Manufacturing in automobile engineering, marine engineering and aerospace engineering has been tremendous. Using computers in manufacturing is receiving particular prominence as industries seek to improve product quality, increase productivity and to reduce inventory costs. Therefore, the emphasis has been attributed to the subject of CAD and its integration with CAM. Designed as a textbook for the undergraduate students of mechanical engineering, production engineering and industrial engineering, it provides a description of both the hardware and software of CAD/CAM systems.

CAD is the use of computer technology for design and design documentation. CAD/CAM software is most often used for machining of prototypes and finished parts. **Computer-Aided Design - Journal - Elsevier** CAM is now a system used in schools and lower educational purposes. CAM is a subsequent computer-aided process after computer-aided design (CAD) and sometimes computer-aided engineering (CAE), as the model generated in CAD and verified in CAE can be input into CAM software, which then controls the machine tool. **Advances in Computer-Aided Design for Manufacturing Programs** **COMPUTER AIDED DESIGN** Most of its uses are for manufacturing and the usual name of the application is CAD/CAM.
