

This volume is the first book to cover the general topic of targeted cancer therapy. It presents a range of targets such as tumor angiogenesis, cell cycle control and cell signalling, COX-2, apoptosis/cell survival, invasion and metastasis and approaches like kinase inhibitors, antisense, and antibody-based therapeutics. The emphasis is on preclinical development, including target validation, development of biomarkers, strategies for combination approaches, and development of resistance. The particular challenges involved in translating these data to clinical application are discussed. This volume should be of broad general interest to researchers and clinicians involved in cancer therapy as well as other scientists interested in current strategies for cancer treatment.

Merry Birthday, Lithuanian Ordafordi (Icelandic Edition), An Historical, Geographical, Commercial, and Philosophical View of the United States of America, and of the European Settlements in America and the West-Indies, Contributions to a History of American State Geological and Natural History Surveys, 1920 (Classic Reprint), Remys Rhyme, Houghton Mifflin Vocabulary Readers: Theme 6.3 Level 4 At Home On The Prairie, A Critical Dictionary of English Literature: And British and American Authors, Living and Deceased, from the Earliest Accounts to the Middle of the ...
