

Railway Economics: A Treatise on the Problem of How to Increase the Earnings of Freight Equipment (Classic Reprint)

Excerpt from Railway Economics: A Treatise on the Problem of How to Increase the Earnings of Freight Equipment Brought to first principles, the main object of a railroad company is to carry and deliver freight and passengers in a safe, economical and expeditious manner. The best brains of mankind have been endeavoring to accomplish this seemingly simple result ever since the introduction of steam, yet the fact (especially pointed out in the leading article of the Railway Equipment Register, of December, 1900,) that equipment costing millions of dollars built for the express purpose of carrying freight moves two hours per carper day and stands twenty-two hours per carper day, clearly demonstrates that much remains to be done before this important problem is reduced to its lowest terms. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
