

Emerging Issues in Biomedical Policy: An Annual Review

Volume 1 discusses the problems inherent in allocating limited biomedical technologies: whose needs take precedence, what individual rights and responsibilities are involved, and when societal good justifies restricting individual good. Volume Two focuses on two substantive areas of biomedical policy beset by conflicts. Physicians, patients, and public officials are locked in new battles over whether and when life-extending technologies should be used or withdrawn. Meanwhile, researchers, government officials, and patients struggle to determine who will receive experimental medical treatment, and what procedures should be instituted to protect the recipients. (Bruce Jennings, Executive Director, The Hastings Center, New York)
