

Report of irrigation investigations in Utah

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903 Excerpt: ... nearly 2,300 acres. Upon the north side of the river, within a mile of the mouth of the canyon, two ditches, the Uinta Central and the Pioneer, which furnish water for 350 acres of land in and about the town of Uinta, are taken out. The Pioneer Ditch claims the distinction of being the oldest ditch taken from the Weber, having been built in 1851. The Uinta Central was built the following year. About 5 miles south of Ogden the Weber leaves the county line of Davis and Weber counties and flows nearly due north to the city of Ogden, where it receives the waters of Ogden River from the east. The Weber below Ogden flows to the northwest 7 or 8 miles, then bends to the southwest and enters Great Salt Lake some 12 miles southwest of the city. The Weber Canal heads about 3 miles above Ogden, and the mill race for the Riverdale Mill heads about 2 miles above the city. Each of these ditches supplies water for irrigation, the total area watered by them being about 480 acres. At Ogden the Wilson Canal and the Hooper Canal are taken from the left bank of the Weber, the head gates of these canals being about 100 feet apart. These two canals water the lands in the lower valley between Ogden and the Great Salt Lake. The Wilson Canal divides about one-fourth of a mile below the head, and one branch, called the Old Wilson Canal, flumes across the Hooper Canal and waters about 300 acres. The other branch supplies water for 3,076 acres. The Hooper Canal, through its branches, the West Weber, the North, the Muskrat, the West, and the South branches, furnishes water for the irrigation of 8,030 acres. A number of canals are taken out of the Weber below the mouth of the Ogden. It is not the purpose, however, of the

present paper to discuss them in any way.
