

# Manual of Mining: Based on the Course of Lectures on Mining, Delivered at the School of Mines of the State of Colorado (Classic Reprint)

Excerpt from Manual of Mining: Based on the Course of Lectures on Mining, Delivered at the School of Mines of the State of Colorado Based originally upon lectures delivered at the Colorado State School of Mines, between 1880 and 1888, the various editions received only such additions and changes as were necessary in its use as a text-book in the mining schools of this and other countries. The Author of the Manual of Mining presents in this edition a complete revision of the work, which now assumes the form of a collaboration with the authors mentioned below. Mr. E. B. Wilson, who needs no introduction to the mining public, brings to the original work a wide range of experience and ability, an accuracy of detail and a discrimination in description, contributing highly to the value of the revision. He has devoted himself particularly to Chapter III of Part I and Chapters V, VI, VII, and VIII, of Part II. Originally planned for Metal-mining, the first issue of the book gave small place to Coal and its extraction. This new edition has of necessity been enlarged to include Coal-mining in all its phases, with full descriptions and many illustrations of modern methods and machinery. The later devices in power generation and distribution, as the steam-turbines, oil, and compressed-air engines, with such appliances as have proven themselves meritorious in economy and safety, are elaborately treated.
