

TRAVIS Pro: Transmission Line Visualization Software and Users Manual, Professional Version

This package enables anyone with a knowledge of circuit design to simulate the behaviour of signals propagating within a transmission line of a network of transmission lines in virtually arbitrary circuit configurations, from microwave circuit designs to digital signal runs on printed circuit boards. It is intended for use by students or newcomers to the arena of transmission line critical circuit design, and should also be useful to designers of high-speed digital or analogue circuits. The package is available at a special student discount price, available from Artech House on request.
