

Text Notes for Electronic Principles

After completing this instruction, you will be able to: 1. Define an ideal voltage source and an ideal current source. 2. Show how to define a stiff voltage source and a stiff current source. 3. State what Thevenin's theorem uses to replace a circuit facing a load resistor and what Norton's theorem uses to replace the same circuit. 4. List two facts about an open device and two facts about a shorted device. 5 Explain why approximations are often used instead of formulas.
