

## Computational Modeling in Lignocellulosic Biofuel Production (Acs Symposium)

This ACS Symposium Series title presents recent advancements in the field. Chapters present original research on ab initio molecular dynamics investigation of xylan hydrolysis; simulations of the structure of cellulose; atomistic simulation of lignocellulosic biomass and associated cellulosomal protein complexes; modeling the cellulosome using multiscale methods; meso-scale modeling of polysaccharides in plant cell walls; energy storage in cellulase linker peptides; QM/MM analysis of cellulase active sites and actions of the enzymes on substrates; molecular simulation methods; and quantum mechanical modeling of sugar thermochemistry.
