

Science on Form: Proceedings of the First International Symposium for Science on Form, University of Tsukuba, Japan, November 26-30, 1985

This book is the Proceedings of the First International Symposium for Science on Form. The Symposium was held on November 26 through 30, 1985 at the University of Tsukuba, Japan. It was organized by The Society for Science on Form, Japan, and sponsored by the Foundation for Advancement of International Science (FAIS). The purpose of the Symposium was to discuss interdisciplinary science aspects of form. Form, to exhibit its tremendous characters, depends on the material and the changes. But, it is the form that appears evident at once and endures. Form is absorbed from every field as media of information. Thirty years and more ago, interdisciplinary problems between earthethics and science were submitted to a symposium on Form in Nature and Art. The relation between form and function had been emphasized philosophically and psychologically. In this quarter century, information theory had exactly decided figures, electronic computer had easily calculated graphics, and laser hologram had completely contained the objective image and reconstructed it.
