

Technology quarterly and proceedings of the Society of Arts Volume 14

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1901 Excerpt: ...of the manner in which this addition acts. In his first experiments he found that the solution, strengthened by the addition of fresh salt, dissolved the crusts that had formed with the ordinary weak working solution and concluded that this was its sole effect. Following, however, Christys reasoning (thisRev., 3, 144) upon experiments on the precipitation of gold from cyanide solutions, he believes that the effect of the addition of potassium cyanide is to dissolve the film which is liable to form on the surface of the zinc and hinder the galvanic precipitation, either by preventing contact or by setting up a counter electromotive force. Gold is satisfactorily precipitated from dilute cyanide solutions as long as the zinc remains active. This addition of fresh salt becomes necessary at intervals when the activity of the zinc begins to decrease. The salt is not, as might be thought, disseminated quickly through the entire solution, but is taken up gradually, though it had all been dissolved. As far as his present experience goes, the author advises to add solid cyanide every six hours--with a new plant one pound cyanide per ton of solution; later, half a pound and even less will be found to be necessary. Precipitation in Cyaniding. By M. W. Aujerson. Min. Sci. Press, 81, 124.--The author attacks the statement frequently made that from a cyanide solution at 90 F. better results are obtained in precipitating with zinc than at ordinary temperature. In his experience he obtained as good results at 320 F. as at 1200 F. He also does not accept the statement that the precipitation of the gold is at present connected with any difficulty, and cites a number of examples with the necessary references to substantiate his

own experience by that of others. Wet
