

Computer-IT Job Superbook 4 books on Computer-Internet Jobs

The four computer, computer games, robotics and internet-website job books are as follows: Book 1. Computer-IT Education-School Job-Business Guide Book 2. Computer Games Job Guide Book 3.

Robotics-Automation-Bionics-Transhumanism-Genetics Job Guide Book 4. Internet-Freeware-Software Job Guide

This Computer-IT Job Superbook also contains the following two general computer-IT Books from my Computer-Internet Superbook:

Computer-Internet Superbook Book 1. Computer-Internet Knowledge-Resource Guide Book 2. Create a Website & Digital Video Guide I created a different related book called Internet Business Superbook:

Five Books on Making Money Online. I tried to create two separate books: a computer-IT job book computer education-school book I couldnt do it.

Theyre so interrelated. All the big computer-IT companies have their own training programs. This book has both: it contains the job contact information, organizations and websites for most computer-technical fields. how you learn about computers and the internet on your own and in school. It also has a section on money-making ideas for computer users.

The main simple ways to make money with a computer are: design websites for people blog create videos then monetize them on youtube Computer education takes on two components: informal formal You have to do a lot of computer learning, either hardware or software (programming) by yourself. It helps if youre curious enough so that it naturally inspires you, like its a challenge to figure out how to create your first computer program like I did with Fortran back in the day. If you got that in you, you can probably earn a living in the computer fields. If youre a technician, you can learn computer hardware to fix computers by following steps and you can

even learn computer programming because its all logical but it helps if its naturally in your blood because it is an artform. There is absolutely no textbook anywhere that tells you how to deal with computers step-by-step in an exact fashion. You need a certain amount of creative troubleshooting abilities. Devry at devry.edu can teach you to be a computer technician with the technical skills to do a job but you wont succeed unless youre the type of person who enjoys fixing computer problems using your imagination and creativity. Computer science is more a creative field than a technocratic field. I provide the formal channels of computer schooling at university and career colleges and some of the many certifications you can earn. You can either study at school for some of these certifications or study on your own. It doesnt matter. You have to pass thest to be certified. I provide some informal ways to learn about computers like: programming website development blogging creating computer video I provide general computer resources like websites, organizations, publications, etc. Computer Certification Info Most of the major colleges have a computer science department. Many offer at-home courses over the internet. Look for ads in magazines like smartbusinessmag.com or pcworld.com. Try #.004-#.005, #621.4 and TK5105 to TK7887 at the library for computer books. Find the instruction books relating to the particular software or hardware you want to learn about. comptia.org, a non-profit trade association advancing the global interests of it professionals and companies, numerous certification programs available iccp.org, 800 ugetccp, institute for certification of computer professionals. phpthinktank.com/archives/55-php-certification.html certiport.com, microsoft and ic3 exam objectives for certiport certification. microsoft.com/learning/mcp/certifications. mspcx, microsoft certifications. The major players in the computer education/certification business, each with a number of certifications, are: Computing
